Math 127, problem set 00
Due: Mon Aug 26

The goal of this problem set is for you to get more comfortable with some technology we'll use to interact online and also for me to get to know you a little better. Please do the following three things towards that end.

1. Make an appointment to come to tell me your 5-minute life story. Your appointment should be for a date up to and including **Tue Aug 27**. I'll send everyone a spreadsheet where you can make an appointment to tell me your life story by Zoom, or you can also just drop by my office hours (MW 9:30-10:20am, 1:30-2:30pm).

2. Go to the following limnu board, using a web browser on something with a touchscreen, like a smartphone or tablet:

   `http://go.limnu.com/banyan-flavorless`

   Find an empty area somewhere on that board and write your name on it.

3. Submit a 3-page scanned assignment on Gradescope. So that means you need to:

   (a) Accept the invite to Gradescope that I will send you soon if I haven't already.

   (b) Figure out how to scan a multi-page document into a single PDF.

   (c) Find three pieces of blank paper. On the first page, draw a doodle (e.g., self-portrait); on the second page, write down an equation or equations that you like; and on the third page, write your name, but large.

   (d) Scan your above as a 3-page PDF, and submit it as your work for PS00. (When you get to the "match" part of submission, the easiest thing to do is to choose "Assign pages sequentially," which matches problem n to page n for $n = 1, 2, 3$. In fact, it will be best to establish the habit of putting one problem on each page and assigning pages sequentially.) When I get your submission, that will also be my signal to check that you made your office hour appointment and check the limnu board for your name.
