

Workflow in Math 131A, Spring 2024

Here is how a typical non-exam week might go in Math 131A. Note that everything is subject to change, based on how things are going. Also, there may be times during class this semester where you'll make mistakes or feel like the material is particularly challenging. **THAT'S OKAY.** Me too! Having that struggle in a setting where there are people around to help you is one of the main reasons to spend the majority of our class time working in groups.

Monday: Completed version of problem set N is due; problem sets are submitted online, so there's some leeway on the due time.

- *Short lecture:* 15–20 minutes of introduction to the day's material.
- *Worksheet/activity:* For 50–60 minutes, we work in groups of 3 or 4 people on an activity for the day, often related to problems on the next homework.

Wednesday: Outline for problem set $N + 1$ is due, again submitted online.

- *Short lecture:* 15–20 minutes of introduction to the day's material.
- *Worksheet/activity:* For 50–60 minutes, we work in groups of 3 or 4 people on an activity for the day, often related to problems on the next homework.
